FiberLUCERNE

A Versatile, Easy to Feed, Highly Nutritious, Palatable Lucerne Forage

- **FiberLUCERNE** is a nutritious fibre feed with a medium energy level. The Lucerne contains naturally occurring vitamins and minerals.
- Adding **FiberLUCERNE** to your horse's or pony's feeding regime will aid with feed utilisation by ensuring a healthy digestive system. The inclusion of **FiberLUCERNE** to the diet will also assist in maintaining healthy gastric pH levels.
- Being completely dust-free with a high moisture content, it helps to keep horses hydrated and enhances feed palatability. When added to your regular hard feed, **FiberLUCERNE** slows consumption and encourages chewing which increases saliva production - this will assist in maintaining optimum gastric health.
- **FiberLUCERNE** contains natural beneficial yeasts and is rich in vitamin A & E, with good levels of available calcium. The addition of Lucerne to the diet is well researched for its ability to maintain good gastric pH levels and therefore reduce the likelihood of adverse gastric conditions.

FIBER LUCERNE FEEDING RECOMMENDATION

- When planning a diet, the most important consideration is that a horse must receive at least 1.5% of its bodyweight in forage fibre dry matter (e.g. hay, pasture and/or **FiberLUCERNE**) per day. The rest of the diet must then be balanced according to the quality and composition of that forage fibre and the physiological demands of the horse e.g. growth, lactation, extra energy for exercise, protein etc.
- **FiberLUCERNE** is an ideal high-fibre forage source to complement your regular hard feed.
- **FiberLUCERNE** can be fed on its own in the feed bowl or mixed with supplements/hard feed.
- When introducing to the diet, increase daily amounts by 0.5kg increments until the desired quantity is reached.
- We recommend feeding a minimum of 2kg per day. Most horses do best on 4kg – 6kg of **FiberLUCERNE** per day if it is the sole fibre source. Additional energy in the form of concentrate feeds, and/or oils can be included in the feed bowl.
- **FiberLUCERNE** is the ideal high-fibre forage source to complement every equine feeding regime, especially at times when availability of other fibre alternatives is limited. It should be introduced slowly and fed as part of a balanced diet. The feeding amount might be influenced by factors such as exercise levels, the horse's condition, or breed and age.

TYPICAL NUTRITIONAL ANALYSIS (Dry Matter Basis)

CRUDE PROTEIN	21%
ACID DETERGENT FIBRE (ADF)	29%
NEUTRAL DETERGENT FIBRE (NDF)	36%
CRUDE FAT	2.7%
CALCIUM	13g/Kg
PHOSPHORUS	2.7g/Kg
SODIUM	0.2g/Kg
SELENIUM	0.02mg/Kg
DRY MATTER CONTENT	45%
NUTRITIONAL JUICES (AS FED)	55%
STARCH & SUGARS	1%-3%
DIGESTIBLE ENERGY (DE)	11MJ/Kg

RECOMMENDED FEEDING RATES For general health (as fed)

PONY	1kg-2kg/feed
HORSES IN LIGHT WORK/ SPELLING/MAINTENANCE	2kg-5kg/feed
HIGH PERFORMANCE	4kg-5kg/feed
WEANLING/YEARLING	2kg-3kg/feed

Feeding Tip: For over-zealous eaters break up your **FiberLUCERNE**, to reduce issues associated with horses that 'bolt their feed'.

FiberLUCERNE is a safe nutritious forage option for cattle, sheep, goats, deer and alpacas.

Raw Ingredient Composition:
100% Lucerne (Alfalfa)
